

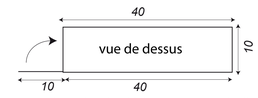
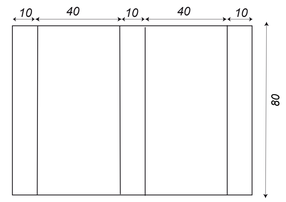
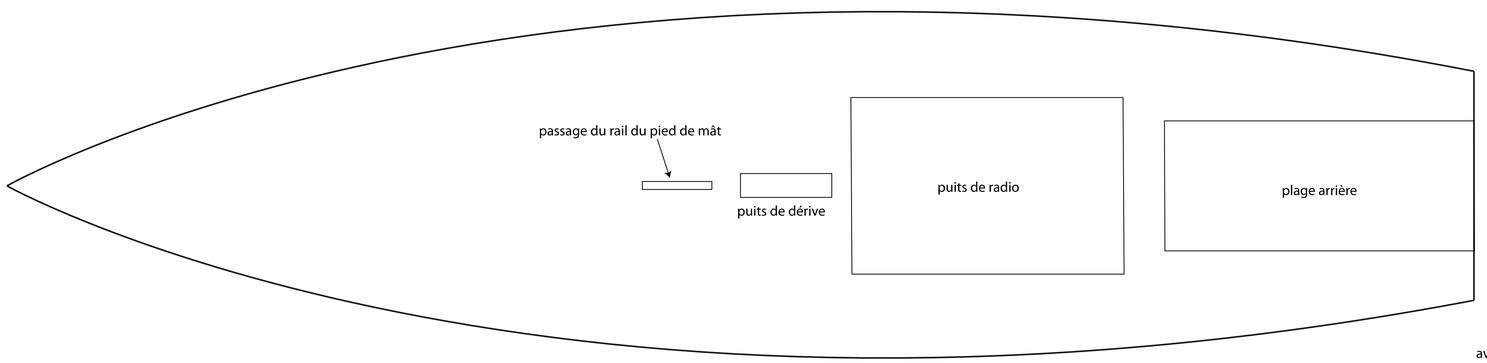
tableau arrière
(donne l'angle de coupe des flancs)



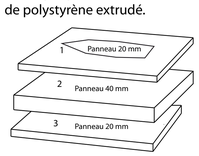
Montage du puits de dérive : avec emballage de boîte à gâteaux (plexi transparent, rodhoïd)
- plier aux dimensions du puits de dérive à chaud
- coller à l'époxy lente 2 composants; une fois sec, rentrer le tout dans la coque, après avoir encollé le tour et laisser durcir.

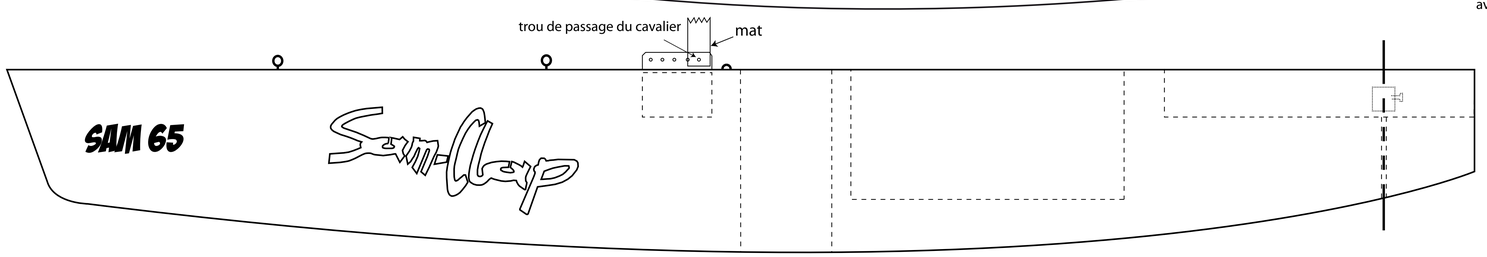


Puits de dérive (déployé)

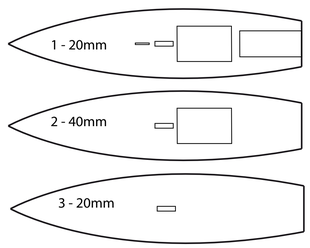


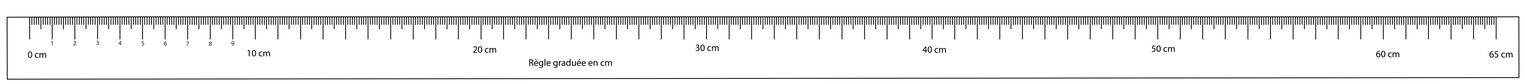
la coque est découpée dans 3plaques de polystyrène extrudé.

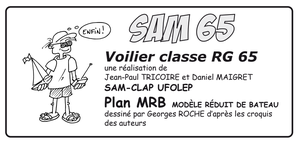


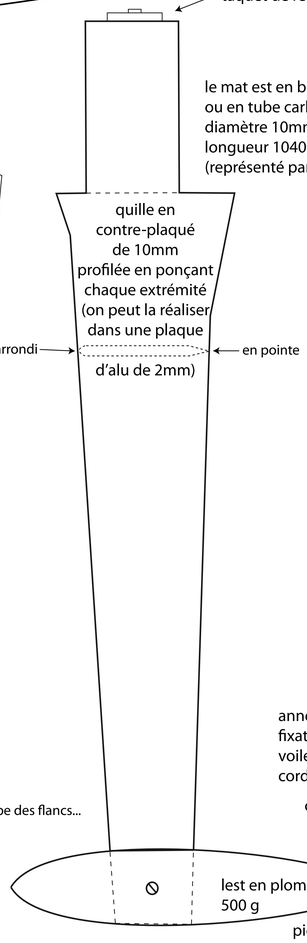


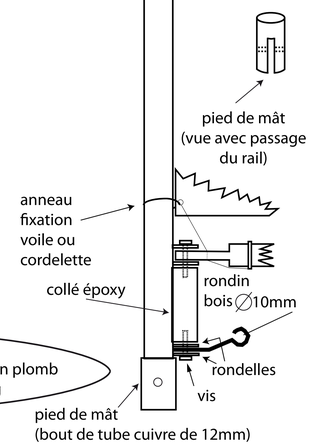
avec le gabarit on découpe différement selon les couches...











puis on assemble en collant les 3 couches et on passe à la découpe des flancs...
